How can I best ensure the check image will be accepted?

For security reasons, there are certain aspects of each check that must be clearly identifiable with each photo image. If any of these aspects are not clearly identifiable, your check may come back rejected. Here's a few tips for best photo quality:

- Lay the check on a flat, well-lit surface. If the check is crumpled or folded, do your best to flatten it out.
- If you have a check with a light background, be sure to take the picture on a solid, darker surface to show contrast between the check and the background.
- Be sure that all four corners of your check are entirely within the frame that is provided on the screen.
- Hold steady. Be sure that the check is not blurry.

Avoid shadows.
